

PMC is an ISO/IEC 17025 accredited calibration lab, offering calibration services to a wide variety of industries, including oil and gas, food and agriculture, utilities, electrical contracting, building safety, manufacturing, medical and aviation. Based in Minneapolis with offices in Denver, Kansas City and Omaha, we calibrate and certify electrical, mechanical, dimensional and physical measuring equipment using NIST-traceable standards.

Electrical

Electrical calibration of test and measurement equipment is essential for preserving accuracy and complying with international standards. PMC calibrates voltage, current, power, RF, process control, resistance, time, frequency, inductance and capacitance.

Physical

PMC uses state-of-the-art equipment and environmentally controlled rooms to give our physical calibration the lowest degree of uncertainty. Our pressure, vacuum, temperature, humidity and pH calibration capabilities set us apart in many leading industries. Additionally, we calibrate back flow prevention equipment including RPZ testers.

Field / Onsite Services

Don't have 3 to 5 days? We'll bring our capabilities directly to your facility to give you the absolute minimum business interruption possible.

Mechanical

PMC provides calibration for your tension, compression, torque and weight measuring equipment.

Dimensional

We provide dimensional calibration services for length, diameter and thickness to assure your measuring hand tools and instruments operate precisely and efficiently.

Certification Management

PMC's certification management software program gives you online access to all of your equipment certifications and provides asset management tools to help fulfill your needs.

Speed!

All PMC processes are designed with customer uptime in mind. Our standard turn time is 3 to 5 business days from receipt. PMC's agreements with vendors prioritize fast turn times for you!

PMC's services does not stop there. Let us source the highest quality products for you via our robust network of partners and resources. Why purchase elsewhere and send in for calibration? Go through a single point of contact for maximum ease and efficiency!

Manufacturers we are able to source and service on your behalf include:

Professional electrical test and measurement instruments

Data loggers and energy recorders

Intelligent power quality and demand solutions

Multimeters, electrical testers, clamp and environmental meters

Thermal imaging, diagnostic and measurement sensing solutions

Worldwide leader of test instruments

Industry expert and leading manufacturer of battery-powered data loggers

Electrical test equipment and measurement instruments

Industrial grade torque wrenches and hand held tools

Automation Components Inc.
Temperature, humidity, pressure, current, gas, interface devices and wireless application solutions

Transformers used in switchgear and motor controllers

Industrial grade infrared windows

Industrial software, PLCs, HMIs and Industrial Computers

Transfer pumps, fuel meters, flow meters and industrial instrumentation

Electronic instruments for industrial measurement, control and networking

Pressure instruments and gauges, cylinders and transducers, FRLs and more

Paperless recorders, data loggers and handheld tachometers

Industrial PCs, flat panel monitors and HMIs

Innovative and cost-effective current sensing products

Intrinsically safe barriers, level sensors and purge systems

Thermocouples, RTDs, thermowells, connection heads and complete temperature sensor assemblies

Industrial automation and networking solutions

Weight-related products and process-control

Measurement of level, flow, pressure and temperature

Digital panel meters and explosion proof instrumentation for intelligent monitoring & control

Panel meters, current transformers, and energy metering and management

CAL, Partlow, PMA and West Instruments products

Have you recently received a calibration service from PMC?
If so, enter to win our quarterly prize drawing. Provide your feedback at:
